SQLite

EDUCATION

Le Wagon London

WEB DEVELOPMENT BOOTCAMP

January - March 2023

9-week full-time intensive web development bootcamp working with HTML, CSS, Bootstrap, JavaScript ES6, SQL, git, GitHub, Heroku, Figma, Ruby, and Ruby on Rails. Helped design, implement, and ship to production both a clone of Airbnb and a Rails prototype of "Mind Mission", a mindfulness training game for 9 to 11-year-olds.

SKILLS AND ABILITIES

- Strong interpersonal skills
- Communication and team work
- Dedication and commitment
- Time management
- Continuous learning
- Problem-solving skills

PROFILE

Recent web development bootcamp graduate with experience in both front-end and back-end technologies passionate about staying up-to-date with industry trends and contributing my skills to a dynamic team. Six months of full-time self-learning post-bootcamp and three portfolio projects. Strong problem-solving skills, attention to detail, and the ability to work both independently and collaboratively. I'm eager to

PROJECTS

Portfolio Site

Built with JavaScript ES6, Bootstrap, MongoDB, Express, and Node.js

- Built with React and TailwindCSS
- Showcases information about my experience and projects, along with their respective live demos
- Designed on Figma
- Fully responsive, began with a mobile first design

YelpCamp

Built with JavaScript ES6, Bootstrap, MongoDB, Express, and Node.js

- YelpCamp is a full-stack web application that allows users to create and review campgrounds.
- Users can perform full CRUD capabilities - users can create, edit, and delete both campgrounds and comments.
- Includes Passport.js for authentication, MapBox in two different locations for presenting maps, and Cloudinary to host the images.
- Deployed live on Cyclic and is a project from
- Based on the Udemy course 'The Web Developer Bootcamp' by Colt Steele.
- I added some features to the app, such as a 404 page. I used Bootstrap to style the app further than what the tutorial taught. I used MongoDB Atlas to host the database

Mind Mission

Built with JavaScript ES6, Bootstrap, MongoDB, Express, and Node.js

- Mind Mission was our team's final project during the bootcamp, Le Wagon. We worked for two weeks as a team of five
- I was responsible for working with JavaScript ES6 and Stimulus, and contributed with Ruby, Ruby on Rails, and a small amount of HTML and CSS
- Mind Mission is a mindfulness training game for 9 to 11-year-olds, designed to help the users learn how to manage their emotions and develop various coping mechanisms through the challenges they solve.
- My main responsibility was working on the third mini game challenge using JavaScript ES6, it was a word scramble game that presented a word on the screen with the letters out of order, and the user had to correctly guess the word to move on to the next round, with three rounds total. There was also a reveal answer button which would present the word unscrambled in place of the scrambled word. Sound effects and modals displaying the outcome of the attempt were also added upon clicking the attempt button
